Introduction

I am a Computer Science student at UET Lahore who loves building software that actually solves problems. Whether I'm developing full-stack applications or experimenting with Generative AI, my goal is always the same: to create tools that make life easier and work more efficiently. I enjoy the challenge of taking a complex idea and turning it into a clean, reliable product that people can actually use.

Education

University of Engineering and Technology (UET), Lahore, BS in Computer Science Sept 2023 – May 2027

- **CGPA:** 3.82/4.00 (Semester 6)
- **Core Coursework:** Data Structures & Algorithms, Database Systems, Object-Oriented Programming, Software Engineering, Computer Organization, Assembly Language.

Experience

GAIRL, Generative AI Intern Certificate | October 2025 - December 2025

- Gained hands-on expertise in NLP Preprocessing and advanced neural architectures including Transformers, RNNs, GRUs, and LSTMs.
- Implemented Agentic AI Frameworks to develop a code reviewer agent that reviews code and provides enhanced code.
- Worked on LLM Fine-tuning and optimization to improve model performance for domain-specific applications like patient readmission classifier.
- Applied Prompt engineering techniques to build chatbots specific for domain and for general purpose as well.

CodeCelix, Full Stack Developer Intern Certificate | August 2025 - October 2025

- Developed TaskBazaar, a service-marketplace platform using React Native, enabling users to upload tasks and service providers to accept them in real-time.
- Built and integrated an Intern Automation System that scans emails and triggers automated interview questions via WhatsApp API.
- Engineered an AI-based Post Generator utilizing Generative AI to automate social media content creation for business marketing.
- Deployed full-stack solutions using the MERN Stack (MongoDB, Express, React, Node.js) with robust admin dashboards.

Projects

Quantumverse | Quantum Learning Platform Github Repo

- Developed an interactive educational platform covering Waves, Modern Physics, and Quantum Mechanics.
- Developed the Simulation Engine, implementing interactive visualizations that allow users to experiment with quantum behaviors and bridge the gap between theory and quantum computing.
- Collaborated on a multi-modal learning architecture, integrating narrative-driven Story Mode with technical simulation modes.

Data Structure & Algorithm Visualizer Live demo

- Built a web-based tool to visualize common data structures (Trees, Graphs, Stacks) and algorithms in real-time.
- Utilized D3.js and React to provide dynamic, step-by-step execution flows to enhance algorithmic understanding.

Technical Skills

Languages: C, C++, Python, JavaScript, Typescript, C#

Full Stack: React Native, MERN Stack (MongoDB, Express, React, Node.js), Next.js, TailwindCSS, D3.js, Django, Flask

AI & Data: Generative AI, LLM Fine-tuning, Agentic Framework Langchain, NLP, Transformers, LSTM, Scikit-learn, Langchain

Version control and Project Management: Git, Jira, Notion, Github
